

Business Results for 1st Half of FYE 3/2025

November 8th, 2024

STELLA CHEMIFA CORPORATION

Securities code: 4109

Index

【Business Results】

- Performance Highlights P. 3
- Financial Summary P. 4 – 12
- Financial Forecast P. 13 – 15
- Shareholder Return P. 16

【Reference Material】

(Corporate Profile • Introduction of Our Business)

- Corporate Profile P. 18
- Subsidiaries & Associates P. 19
- Introduction of Our Business P. 20 – 36

Performance Highlights

[1st Half of FYE 3/2025 Results (Year on year)]

- ◆ Shipment volume of Semiconductors increased due to recovery of market conditions.
- ◆ Shipment volume of enriched boron (boron-10) in the energy increased due to shipment to new nuclear facilities overseas.
- ◆ Domestic purchase price of anhydrous hydrofluoric acid (AHF) rose due to higher market price and weakened JPY.

[Full-year Forecast]

- ◆ In order to monitor the impact of uncertainties, such as the price of anhydrous hydrofluoric acid (AHF) and trends in foreign exchange rates, on business performance, the full-year forecast remains unchanged.

Financial Summary

(million yen)	1st Half of FYE 3/2024	1st Half of FYE 3/2025	Increase/ Decrease	Percentage Increase/ Decrease
Sales Revenue	14,497	18,160	3,662	25.3
Gross Profit	3,014	4,145	1,130	37.5
Operating Profit	1,122	2,180	1,058	94.3
Ordinary Profit	1,524	1,965	440	28.9

Shareholder Return

【Dividend paid and dividend forecast】

◆ FYE3/2024 ● Annual dividend : 154 yen per share

◆ FYE3/2025 ● **Annual dividend forecast : 170 yen per share** (Released on May 10th, 2024)

※The Company aims to achieve a total return ratio of 100% through dividends and share repurchases, but the specific amounts and allocations will be determined based on future business forecasts, stock price trends, and other factors.

Introduction of Our Business

Manufacture and applications of hydrogen fluoride

*There are five main grades of fluorite purity, and for semiconductor applications, high quality fluorite with a purity of 97% or higher is required.

Concrete materials, etc.

Reaction and refinement using our proprietary technology

Treatment of surface such as stainless steel

Raw materials such as alternatives for CFCs

Chemicals for etching and cleaning for semiconductors

Materials for secondary batteries

Enriched Boron for nuclear and medical applications

Reaction catalyst Oral care products ...etc.

Introduction of Our Business

High-Purity Chemical Business

Semiconductors	<ul style="list-style-type: none"> • Manufacture and sale of chemicals for etching and cleaning in the semiconductor and LCD panel manufacturing processes
E n e r g y	<ul style="list-style-type: none"> • Manufacture and sale of enriched boron (boron 10) used for energy related facilities and cancer therapy (BNCT)
	<ul style="list-style-type: none"> • Development of materials to improve the performance of lithium-ion secondary batteries
E l e c t r o n i c M a t e r i a l s	<ul style="list-style-type: none"> • Manufacture and sale of tantalum production aids for tantalum capacitors
	<ul style="list-style-type: none"> • Manufacture and sale of raw materials for camera and stepper lenses
	<ul style="list-style-type: none"> • Manufacture and sale of R&D products in the small-quantity production stage

Purchased Goods	<ul style="list-style-type: none"> • Sales of purchased goods

Introduction of Our Business

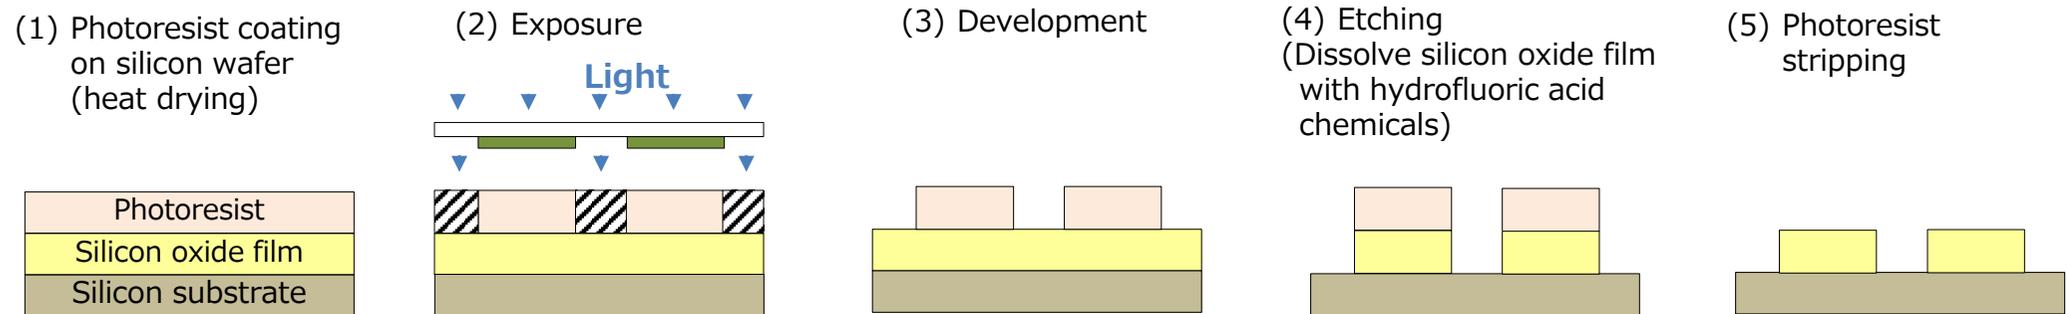

- Semiconductors -

Ultra-High Purification Technology

- Impurity levels of less than 1 ppt (1×10^{-12}) are controlled by ultra-purification and ultra-cleaning technologies
- Mass production of ultra-pure chemicals for ultra-high integrated circuit

<p>Ultra High Purity Hydrofluoric Acid</p>	<ul style="list-style-type: none"> • Hydrofluoric acid (HF) is the only chemical capable of etching out silicon oxide film • Chemical solutions are indispensable to the semiconductor manufacturing process and require ultra-high purity • In particular, dilute hydrofluoric acid is used in a number of semiconductor processes
<p>Ultra High Purity Buffered Hydrofluoric Acid</p>	<ul style="list-style-type: none"> • Mixed aqueous solution of hydrofluoric acid (HF) and ammonium fluoride (NH_4F) • Mainly used in processes such as etching and cleaning of insulation films • Chemicals with etch rates ranging from tens of $\text{\AA}/\text{min}$ to thousands of $\text{\AA}/\text{min}$ can be produced

Example of Application (Photolithography Process)

Introduction of Our Business

- Semiconductors -

Examples of the company's products

Product name (Semiconductors)	Description
Ultra-high-purity hydrofluoric acid	Chemical solutions used in the wet etching and wet cleaning of silicon wafers in the manufacture of semiconductors, FPDs, solar cells and MEMS
Ultra-high-purity buffered hydrofluoric acid	Mixed aqueous solution of ultra-high purity hydrofluoric acid and ammonium fluoride solution
BHF	A chemical mixed with 50% hydrofluoric acid and 40% ammonium fluoride solutions
LL BHF	BHF with various functionalities made possible by adding a surfactant
LAL BHF	BHF that contains a surfactant has enabled it to achieve extended service life and given other advantages by optimizing the concentration of ammonium fluoride at 17% to 20%, about half the concentration of ammonium fluoride contained in conventional BHF.
Ex-LAL BHF	Surfactant-containing BHF (buffered hydrofluoric acid) with ammonium fluoride concentration reduced to 5% or less and crystal precipitation in equipment suppressed
HSN BHF	Similar to LAL BHF, a chemical solution that allows silicon oxide film etching with high selectivity with respect to a silicon nitride film while having merits such as longer life

Introduction of Our Business

- Semiconductors -

Production capacity of High Purity Hydrofluoric Acid for Semiconductors

Kitakyushu Factory

Kitakyushu City, Fukuoka

30,000 t /year

Sanpo Factory

Sakai City, Osaka

65,000 t /year

STELLA CHEMIFA
SINGAPORE

Singapore

10,000 t /year

105,000 t /year

* As a comprehensive manufacturer of fluorine compounds, we use our own technology to do everything from manufacturing to filling.

Introduction of Our Business

- Energy -

Enrichment plant
(Izumiotsu City, Osaka)

Enriched Boron (Boron-10) and its features

- Natural boron is made up of two isotopes, boron-10(20%) and boron-11(80%)
- Developed technology to enrich boron-10 to over 99%
- Established mass production technology of enriched boron for the first time in Japan(2000)
- Boron-10 has an extremely high capacity to absorb neutrons, and further enriching it can increase its ability to absorb neutrons.

Production capacity

Products		Production Capacity
Enriched Boron	^{10}B	6t / year

(* When converted to the following items)

Enriched Boric Acid	$\text{H}_3^{10}\text{BO}_3$	36t / year
Enriched Potassium tetrafluoroborate	K^{10}BF_4	75t / year

Introduction of Our Business

- Energy -

Applications of Enriched Boron Compounds

- Excess reaction control of pressurized-water reactors by dissolving into primary cooling water
- Neutron-absorbing material of spent nuclear fuel transportation and storage containers
- Material of control rods of nuclear reactors and rack material of spent nuclear fuel pools
- Water source for facilities responding to specific major accidents, etc.
- Raw material for cancer treatment drugs (BNCT: Boron Neutron Capture Therapy)

Advantages of Using Enriched Boric Acid

- (1) Improvement of corrosive environment in nuclear reactors
Required ^{10}B concentration can be secured at 1/5 of natural products.
Operation at low concentration is possible, and corrosion in facilities can be reduced.
- (2) Reduction of storage costs
Heating and heat retention are required to maintain the dissolution of boric acid water.
Enriched boric acid realizes the reduction in concentration, and reduces the problem of heat retention.
In addition, the storage tank can be made smaller.
- (3) More reliable control
In the event of an emergency stop, more reliable control is possible, and since boric acid is harmful to the human body and the environment, the reduction of overall amount of boric acid is an advantage.

Introduction of Our Business

- General Products -

Tin Fluoride

- The GMP inspection by the USFDA for tin fluoride, an active ingredient of OTC anticaries drugs, was completed, and we obtained official approval.
- We sell “tin fluoride” mainly in Europe and the US as a GMP-compliant product

Izumi Factory's manufacturing building
(Izumitsu City, Osaka)

- * We expect to see big demand mainly in Europe and the US, where there is strong interest in dental health and beauty.

⇒ We are also developing new applications other than toothpaste
(e.g., hoof sterilization)

Introduction of Our Business

- New Initiatives-

- The key themes we are currently working on

*Details regarding the items found in the red frame will be explained on the following pages

Research area	Theme
Semiconductors	<ul style="list-style-type: none">● Improvement of chemical solutions for the miniaturization of semiconductor devices● Development of etching solutions that improve the semiconductor manufacturing process● Improvement of selective etching solutions for use in semiconductor manufacturing
Energy	<ul style="list-style-type: none">● Development of materials for all-solid-state batteries● Improvement of additives for lithium-ion secondary batteries
New applications for inorganic fluorine compounds	<ul style="list-style-type: none">● Development of cell culture vessels (*)● Development of phosphor materials for next-generation displays (*)● Development of low-dielectric materials (*)● Development of nanofiller for adjusting refractive indices

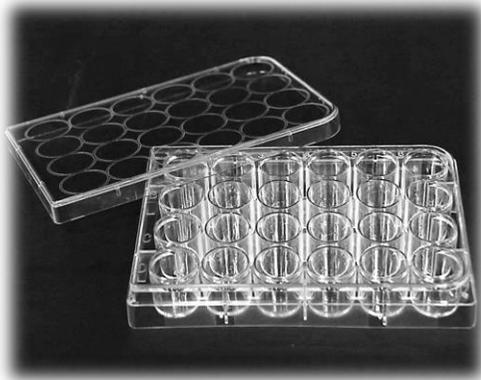

Introduction of Our Business

- New Initiatives(Cell Culture vessel) -

Development of Cell Culture Vessels

- Cell Culture Vessels are used in a wide range of fields, including regenerative medicine and drug development
- Our unique surface treatment method provides a suitable surface for cell culture.

<Products we have developed>

<Cell culture>

<Regenerative medicine and drug development>

Initiatives with an eye toward full-scale sales

- ✓ Test production equipment in operation, small-lot production system established
- ✓ Expanded product lineup
- ✓ Currently promoting sample work

Focus on the expansion of applicable cell types and sample work

Introduction of Our Business

- New Initiatives(Electronic Materials1) -

Development of phosphor materials for next-generation displays

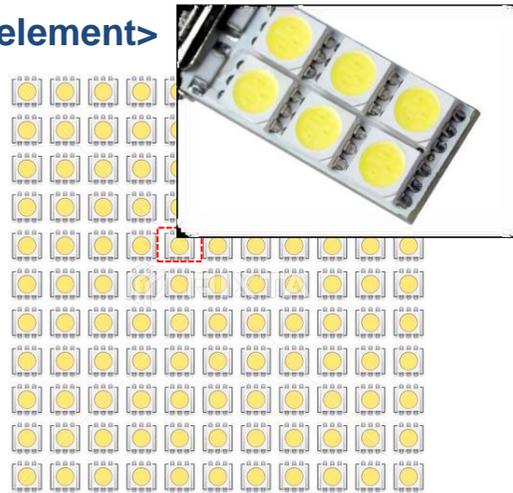

- A phosphor is a substance that absorbs light energy from the outside, converts it into light of another wavelength, and emits it.
- The product we have developed (fluoride phosphor) is efficiently excited by blue light and emits sharp red light

Applications: LED/LCD backlights, displays, etc.

<Products we have developed>

<LED element>

<LED lighting >

<Display>

Working to improve durability, a focus of increasingly high-performance mini-LED and lighting applications

- ✓ The durability of the red phosphor was improved by 50% compared with our conventional prototype.
- ✓ Currently promoting sample work

Some users are currently conducting verification tests using the actual product LEDs

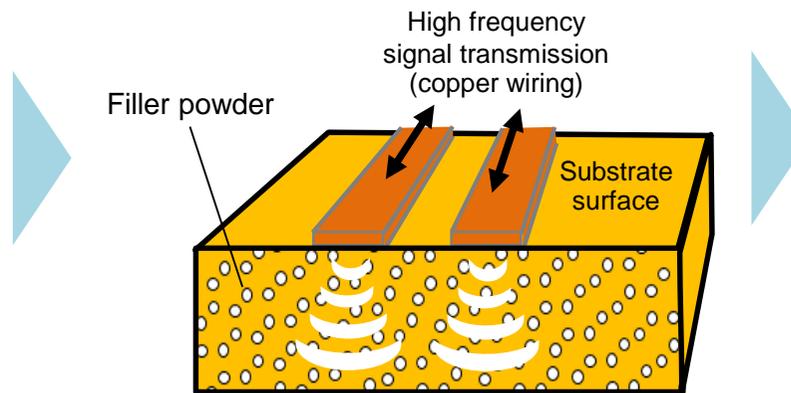

Introduction of Our Business

- New Initiatives(Electronic Materials2) -

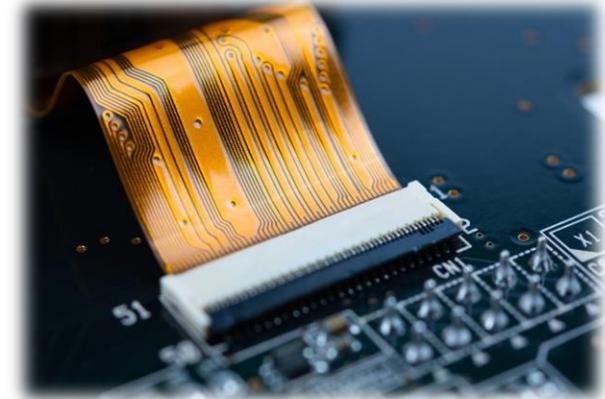

Development of Low-dielectric Materials

- The higher a frequency is, such as with 5G, the more likely radio waves are to attenuate, and so there is a need to develop materials that suppress transmission loss in order to ensure stable, high-speed communication. Low-dielectric materials are one example solution
- The product we developed is used as an additive (fluoride filler) to resin for circuit board materials

<Products we have developed>

<Flexible circuit boards for electronic devices>

Development of filler with the ability to suppress transmission loss

- ✓ Developed a new filler with properties that allow for adjustment of the thermal expansion of circuit boards and
- ✓ Loss tangent 0.001 @ 10 GHz or less

We are currently promoting customer evaluations of products developed as materials for high-frequency circuit boards

Introduction of Our Business

- Transportation Business -

Initiatives aimed at the improvement of corporate value

1. Promoting initiatives focusing on profitability

- Revision of low-price transactions: Revising the rates to ones commensurate with costs and revising the transactions themselves
- Acquisition of new projects: Actively responding to inquiries, identifying potential demand of existing shippers, collaborating with other departments, etc.

2. Construction of stable business foundations

- We recruit with an eye on the future while looking at our age composition, and cultivate managers and senior employees systematically.
- We use external training to promote the acquisition of skills and qualifications.
- We secure vehicles and containers by type matched to needs.

3. Continued strengthening of the compliance system

- We prevent dangerous driving and overwork by using drive recorders and digital tachographs, and reviewing operational management work.
- Enhancement of employee education, promotion of the understanding of related laws and regulations, etc.

4. Handling of the 2024-problem in logistics

- Establishment of an internal system conforming to the “Standards for improvement of the work hours, etc., of automobile drivers (revised in April 2024)”

Introduction of Our Business

- Transportation Business -

TOPICS

Orders for cleaning are increasing, and we are no longer able to respond even with our existing facilities operating at full capacity

We are increasing our ISO tank container cleaning facilities from 3 lanes (existing) to 5 lanes in order to increase sales

Hazardous material tank container washing lane
Yokohama Office (operation began in July 2024)
